WORK AND RESEARCH EXPERIENCE

Application Developer (Experienced Fullstack Developer, AI Engineer) **IBM Solutions Delivery**

May 2025 to present

- Implemented an AI coding assistant following an agentic AI approach, developed authorization features, optimizations, and overall preparation of the application for commercialization
- Built an SAP terms translator from English to Japanese and vice versa following an agentic AI approach as a proof of concept application presented to several Japanese clients
- Developed Japanese localization features including frontend localization, and translation services using LLM to add backend localization on various assets
- Implemented an end to end agentic AI solution for Maximo automation scripting issues. Utilized WatsonX Orchestrate to deploy agents and to integrate with 3rd party applications.
- Implemented frontend and backend maintenance, code improvements, and authority access features to a Japanese broadcasting station's admin portal.
- Technology/Tools Used: NextJS, FastAPI, React, Langchain, Langgraph, Watsonx, SQLite, Streamlit, ChromaDB, S3 Vectors, SQLite, Streamlit, Docling, AWS Bedrock, AWS, WatsonX, Angular, Java, SQL, SoapUI, DBeaver, Eclipse, VSCode, Podman, Insomnia

Engineer (Frontend/Fullstack Developer) - Cloud Solutions **Samsung Research and Development Philippines**

August 2021 to April 2025

- Led the fullstack development of an internal AI Dashboard, and application release to other R&D centers. Integrated the company's IdP for enhanced security.
- Migrated legacy dashboards to NextJS and React, improving performance, maintainability, and user experience.
- Led the migration of multiple deprecated applications to modern web stacks, streamlining development workflows and reducing technical debt
- Developed UI/UX improvements and optimized frontend components for internal admin portals, ensuring responsive and intuitive interfaces.
- Built interactive frontend features and integrated backend APIs using React, VueJS, AngularJS, NodeJS, and Python, enhancing internal collaboration.
- Implemented code optimizations, reusable components, and bug fixes across projects to improve stability, performance, and consistency.
- Technology/Tools Used: NextJS, React, Typescript, Javascript, AngularJS, Tailwind CSS, Material UI, Zustand, Redux/Redux toolkit, jQuery, Jest, React Testing Library, API Integration, Prisma, Postgres, Python, Flask, Dart components, NextJS, Nginx, SQLite, Docker/Docker compose, Gauss AI, AWS

JavaScript Developer – Technology, Strategy & Transformation **Deloitte Consulting Philippines Delivery Center**

October 2020 to January 2021

- Analyzed current implementations of workflows, customized scripts to current workflows, and

proposed workflow improvements using ServiceNow for clients based in New Zealand

EDUCATION

Bachelor of Science in Computer Engineering S.Y. 2016-2021

Electrical and Electronics Engineering Institute, University of the Philippines

- CGWA: 1.88 (1 - highest, 5 - lowest)
- Undergraduate Capstone Project: Wireless Sensor Networks for Telerehabilitation of Parkinson's Disease Patients using Rhythmic Auditory Stimulation
 - Leveraged Arduino and bluetooth along with mobile and cloud technologies in the telerehabilitation of patients.
 - Tech used: Arduino, Bluetooth 4.0, Kotlin, Flutter, Firestore
 - Finalist in Design Category of Undergraduate Project Competition under the College of Engineering
 - Presented at EAI PervasiveHealth 2021 Conference
 - Published on [Springer](#)

PERSONAL SKILLS

Languages

- Filipino (native)
- English
 - IELTS: 7.5 Overall (7.0 Speaking, 6.5 Writing, 8.5 Listening, 8.0 Reading)

Technical Skills

- AI
 - Prompt Engineering, RAG, MCP, Generative AI
- Web Development
 - Frontend: HTML, CSS, JavaScript, NextJS, AngularJS, Angular, VueJS, PugJS, React, API integration, jQuery
 - Backend: FastAPI, Prisma, Node, Django
 - Database: SQL, Postgres
 - Other tools: Git, Visual Studio Code, Postman, Bash
- Coding Proficiency
 - Algorithm: C++, Python, Java
- Design: Figma
- Internet of Things: Microcontrollers, Arduino, Sensors, Bluetooth
